

Common Protocol REDCap Build and Case Report Forms Now Available

To: RePORT Collaborating Countries

From: RePORT International Coordinating Center

Date: October 9, 2024

Subject: Common Protocol REDCap build and Case Report Forms are now available.

The RePORT International Coordinating Center (RICC) is pleased to announce the availability of a centrally developed REDCap build and associated Case Report Forms that satisfy the collections required by the RePORT Common Protocol version 2.1. The REDCap build can be installed locally at participating countries and sites to ensure all data required by the Common Protocol is collected in a standardized format that will simplify harmonization, data requests, and data QA.

Because each RePORT country may collect data above and beyond what is required by the Common Protocol, you may customize the REDCap build after it has been locally installed. These changes are anticipated to add additional items to this minimum set of data elements expected by the Common Protocol. Changes should not be made to remove data items or rename standardized field names. To help ensure data integrity of the Common Protocol data variables and standardized field names, RICC should be notified prior to any changes or additions being made.

To request access to the REDCap build XML and associated Case Report Form packet please contact tbricc.cp.redcap@frontierscience.org.
